

# Handwash

## A Powerful but gentle everyday hand wash

### What is Handwash?

Handwash is a daily use hand cleaner which contains a blend of powerful but gentle cleaning agents and emollients, to leave your hands clean and feeling soft.

### How does Handwash work

Handwash contains a lanolin derivative to replace the natural oils that are lost when washing your hands. Handwash also contains Glycerin which is a humectant. Humectants are good for the skin because they attract water, which in turn hydrates the skin. Handwash is abrasive and is solvent free.

### Key features and benefits of Handwash

- Will remove grease and dirt.
- Contains emollients keeping your skin soft.
- Suitable for frequent hand washing.
- Fresh clean fragrance.
- Free from abrasives.
- Contains no solvents.
- Can be used with or without water.
- Will not dry or crack hands.

### How to use Handwash?

- Remove watches and rings as dirt and grime will gather around them.
- One pump of the dispenser will supply enough soap for cleaning your hands, for a heavy-duty application you may require more.
- Work the soap into a lather and rinse with water. If there is no water available for rinsing, just wipe the soap away with a soft cloth.

### Health and Safety

Always ensure that precautionary measures found in the MSDS sheet for Handwash are read and followed before use and please ensure that appropriate PPE is used when preparing, mixing and applying products.
